

# Allcargo Logistics — Company Profile & Services

Reference document for the customer-support chatbot · Company background, services, and FAQs

## 1. Company Snapshot

| Field              | Details                                                                                                                                               |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| Full name          | Allcargo Logistics Limited (formerly Allcargo Global Logistics)                                                                                       |
| Founded            | 1993, by Shashi Kiran Shetty                                                                                                                          |
| Operations began   | 1994, as a cargo handling operator at Jawaharlal Nehru Port (JNPT), Mumbai                                                                            |
| Headquarters       | Mumbai, India                                                                                                                                         |
| Founder / Chairman | Shashi Kiran Shetty                                                                                                                                   |
| Core segments      | International supply chain (LCL/FCL, freight forwarding), Container Freight Stations (CFS), Contract Logistics, Logistics Parks, Express Distribution |
| Global reach       | Operations and trade lane network spanning around 180 countries through its subsidiary ECU Worldwide                                                  |
| Key subsidiary     | ECU Worldwide (formerly ECU-Line) — non-vessel operating common carrier (NVOCC) network                                                               |
| Listing            | Publicly listed in India (BSE/NSE) under the ticker ALLCARGO                                                                                          |

## 2. Company Overview

Allcargo Logistics is an Indian integrated logistics company headquartered in Mumbai. It began in 1994 as a cargo-handling operator at Jawaharlal Nehru Port and has grown into one of the largest players in India's international supply-chain and freight-forwarding sector, with a global network spanning roughly 180 countries through its subsidiary ECU Worldwide.

The company positions itself as a customer-centric, technology-driven logistics provider, offering everything from small less-than-container-load shipments to full container loads, warehousing, and last-mile express delivery. It operates across multiple business lines rather than a single service, which is what lets it serve customers ranging from small exporters to large industrial manufacturers.

This breadth matters in practice because a single customer's shipment can touch several of these business lines at once. A mid-sized exporter, for instance, might use Allcargo's international supply chain business to consolidate an LCL shipment bound for Europe, rely on a CFS facility at the port of origin for export documentation and bonded storage, and separately use the express distribution network to move finished goods domestically to the port in the first place. Understanding the company as a connected set of services, rather than isolated business units, is important context for answering a customer's question accurately, since a query that sounds like it belongs to one service line often has a natural connection to another.

The customer base spans a wide range of shipment sizes and industries as a direct result of this multi-line structure. A small exporter shipping a handful of pallets of textiles typically uses LCL consolidation and customs brokerage support without ever needing a dedicated warehouse relationship. A large automotive or chemicals manufacturer, by contrast, is more likely to be a contract logistics customer first — using an Allcargo industrial park for ongoing warehousing and distribution — and only occasionally an international freight customer when a specific shipment needs to cross a border. A retailer running e-commerce fulfilment may use the express distribution network almost exclusively for last-mile delivery, with little or no involvement in the international or CFS side of the business at all.

Recognizing which of these customer profiles a given question is coming from is often the fastest way to identify which service line, and which supporting document in this reference set, actually applies.

### 3. Company History & Milestones

Allcargo's story starts with founder Shashi Kiran Shetty, who began his career in logistics as a trainee before starting his first venture, Trans India Freight Services. In 1993 he founded what would become Allcargo Logistics, initially focused on customs house agency and freight forwarding at JNPT, Mumbai.

A pivotal early move was becoming the India agent for Antwerp-based ECU-Line in 1995, which introduced the company to Less-than-Container-Load (LCL) consolidation — combining multiple smaller shipments into a single container to cut costs. This became a core part of the business. Below is a condensed timeline of key milestones.

| Year | Milestone                                                                                                                         |
|------|-----------------------------------------------------------------------------------------------------------------------------------|
| 1993 | Shashi Kiran Shetty founds the company in Mumbai.                                                                                 |
| 1994 | Operations begin at Jawaharlal Nehru Port (JNPT) as a customs house agent and freight forwarder.                                  |
| 1995 | Antwerp-based ECU-Line appoints Allcargo as its India agent, marking its entry into Less-than-Container-Load (LCL) consolidation. |
| 2003 | First Container Freight Station (CFS) opens at JNPT.                                                                              |
| 2004 | Company renamed Allcargo Global Logistics Private Limited.                                                                        |
| 2006 | Company goes public (IPO oversubscribed over 7x); acquires ECU-Line outright, gaining a global ocean freight network.             |
| 2007 | New CFS facilities open in Chennai and Mundra.                                                                                    |
| 2011 | Company renamed Allcargo Logistics Limited.                                                                                       |
| 2013 | Acquires US-based Econocaribe Consolidators and a stake in Netherlands-based FCL Marine Rotterdam.                                |
| 2016 | ECU-Line network rebranded globally as ECU Worldwide.                                                                             |
| 2017 | New CFS opens in Kolkata; ECU360 digital booking and tracking platform launched.                                                  |
| 2018 | Enters logistics and industrial parks / warehousing under Allcargo Logistics Industrial Parks.                                    |
| 2020 | Acquires a controlling stake in Gati Ltd., a major Indian express distribution company.                                           |
| 2021 | Acquires 65% of Swedish logistics firm Nordicon for about \$29 million.                                                           |
| 2023 | Shashi Kiran Shetty re-designated Executive Chairman; company marks 30 years in business; Gati rebranded AllcargoGati.            |
| 2025 | AllcargoGati fully merges into the parent company, consolidating domestic express operations.                                     |

Read together, these milestones show a consistent growth pattern: organic expansion of the core freight-forwarding and CFS business through the 2000s, followed by a wave of international acquisitions in the 2010s that extended the company's reach into Europe and the Americas, and a more recent push into domestic express distribution and digital platforms in the 2020s. A customer asking how long Allcargo has operated internationally, for example, can be pointed to the 2006 ECU-Line acquisition as the milestone that gave the company its first true global ocean freight network, rather than the company's 1993 founding, which was domestic in scope.

### 4. Services Offered

## International Supply Chain (ISC)

- Less-than-Container-Load (LCL) consolidation — Allcargo is one of the largest non-vessel operating common carriers (NVOCC) in this segment globally.
- Full Container Load (FCL) / Neutral FCL freight forwarding.
- Air freight forwarding and export/import handling.
- Customs brokerage and documentation support.
- Special cargo handling: hazardous (DG) cargo, ODC (over-dimensional cargo), reefer/temperature-controlled shipments, ISO tank services.

In practice, LCL and FCL represent two different ways of buying container space rather than two different kinds of shipment. A customer with a small volume of cargo that would not fill a container on its own uses LCL, paying only for the space their cargo occupies while Allcargo consolidates it with other customers' cargo bound for the same destination. A customer with enough volume to fill a container outright books FCL instead, and pays for the whole container regardless of how full it is, in exchange for not having to share space or wait for consolidation. Neutral FCL forwarding extends this to customers who want Allcargo to manage the booking and documentation for a full container without Allcargo acting as the NVOCC of record.

It is also worth being explicit about what a customs house agent and a freight forwarder actually do, since both terms describe Allcargo's earliest role at JNPT and both remain relevant to how the company operates today. A customs house agent is licensed to prepare and file the paperwork needed to clear cargo through customs on a shipper's behalf — declarations, duty calculations, and the physical presentation of documents to customs authorities. A freight forwarder arranges the actual movement of cargo between origin and destination, coordinating with carriers, ports, and warehouses, but does not necessarily own any of the ships, aircraft, or trucks involved. Allcargo has performed both roles since its earliest days at JNPT, and the CFS and ICD network described in Section 4 exists specifically to support the customs house agency side of that work.

## Container Freight Stations (CFS) & Inland Container Depots (ICD)

- CFS facilities at JNPT (Mumbai), Chennai, Mundra, and Kolkata handling export/import cargo, bonded and open warehousing.
- A joint-venture ICD at Dadri (National Capital Region) with Container Corporation of India (CONCOR).
- Container maintenance, repair, and first/last-mile transportation to and from ports.

A CFS functions as an off-dock extension of a port: containers are moved from the port to the CFS for customs examination, consolidation, deconsolidation, and storage, which relieves congestion at the port itself and gives exporters and importers more space and time to complete documentation. An ICD serves a similar function but is located further inland, allowing customs clearance to happen closer to a customer's own facility rather than requiring cargo to be moved all the way to a coastal port first. Allcargo's joint-venture ICD at Dadri, run with Container Corporation of India, gives customers in the Delhi NCR region this inland clearance option.

## Contract Logistics & Warehousing

- Third-party logistics (3PL) — warehousing, distribution, and production logistics for manufacturers.
- Logistics and industrial parks located in hubs including Hyderabad, Bengaluru, Ahmedabad, and the Delhi NCR.
- Sector-specific solutions for chemicals, e-commerce, automotive, and retail supply chains.
- Kitting, reusable packaging, and pre-production/ordering-and-replenishment services.

This business line is distinct from the CFS and ICD network in that it is not tied to a customs clearance point at all — a manufacturer can use an Allcargo logistics park purely for ongoing warehousing and domestic distribution, with no export or import shipment involved. Sector-specific handling matters here because chemicals, for instance, require different storage, handling, and safety compliance than e-commerce parcels or automotive components, and Allcargo's contract logistics offering is built around accommodating those differences within the same network of parks.

Kitting and reusable packaging services are worth explaining further, since they are less immediately self-explanatory than warehousing itself. Kitting refers to assembling individual components into a pre-packaged set — for example, bundling several related automotive parts into a single kit before they are shipped to an assembly line — which reduces handling steps for the manufacturer downstream. Reusable packaging programs, common in automotive and industrial supply chains, involve durable containers or crates that are returned and reused across multiple shipment cycles rather than discarded after a single use, reducing both packaging cost and waste over time.

## **Express Distribution**

- Domestic surface and air express delivery across India (via the former Gati network, now merged into Allcargo).
- Cash-on-delivery (COD), door-to-door delivery, and last-mile solutions, including an electric-vehicle fleet for first/last-mile delivery.

Express distribution is the company's most customer-facing, retail-oriented business line, in contrast to the more business-to-business nature of ISC, CFS, and contract logistics. It is the business line most likely to generate direct end-consumer questions about delivery timing, cash-on-delivery availability, and last-mile tracking, since it is the part of Allcargo's operation an individual recipient is most likely to interact with directly.

The 2020 acquisition of a controlling stake in Gati Ltd. is what gave Allcargo this domestic express capability in the first place, since the company's earlier growth had been concentrated in international freight forwarding and CFS operations rather than parcel-level domestic delivery. The subsequent 2023 rebranding to AllcargoGati and the full 2025 merger into the parent company reflect a gradual integration of that acquired network into the core Allcargo brand, and a customer who previously dealt with Gati directly should now expect the same service to be presented under the Allcargo name.

## **Digital Platform**

- ECU360 — an online platform for booking, real-time shipment tracking, and supply-chain visibility, relaunched in 2017 as part of the company's digital-transformation push.

ECU360 is the single platform that ties the other service lines together from a customer's point of view: the same booking reference created for an LCL or FCL shipment can be tracked through customs clearance at a CFS, and onward through final delivery, without the customer needing to contact each operational team separately. Any chatbot question about tracking a shipment, checking a booking status, or getting a real-time update should point the customer toward ECU360 as the primary self-service tool.

## **5. Global Network & Corporate Structure**

Allcargo's international reach runs primarily through ECU Worldwide (formerly ECU-Line), its wholly owned NVOCC subsidiary, which connects thousands of trade lanes across roughly 180 countries. The company has grown its international footprint through acquisitions — including US-based Econocaribe Consolidators, a stake in FCL Marine Rotterdam, and a majority stake in Swedish logistics firm Nordicon.

- Allcargo Supply Chain Limited — wholly owned subsidiary for contract logistics, warehousing, and distribution.
- ECU Worldwide — wholly owned NVOCC / LCL and freight-forwarding network.

- Nordicon AB — majority-owned Swedish logistics subsidiary (European network).
- Former Gati / AllcargoGati — domestic express distribution business, fully merged into the parent company in 2025.

This structure means a customer's shipment is very often handled by more than one legal entity within the Allcargo group without the customer needing to be aware of the distinction — an LCL booking might be issued under ECU Worldwide as the NVOCC of record, while the domestic pickup and delivery legs are handled by the former Gati network now fully merged into the parent company. For chatbot purposes, the group should generally be presented to a customer as a single company, "Allcargo," unless a question specifically concerns which legal entity issued a particular shipping document.

It is worth noting how each acquisition extended the network into a specific region rather than simply adding scale in the abstract. Econocaribe Consolidators, acquired in 2013, strengthened Allcargo's presence in the Americas and the Caribbean specifically, an origin and destination region the company had comparatively less direct presence in before that acquisition. The stake in FCL Marine Rotterdam, acquired the same year, gave the company a stronger foothold in one of Europe's largest container ports. Nordicon AB, acquired in 2021, extended the network into the Nordic countries. A customer asking whether Allcargo has direct presence in a specific region can generally be answered by tracing which of these acquisitions covers that part of the world, rather than relying only on the general 180-country figure.

## 6. Leadership

- Shashi Kiran Shetty — Founder and Executive Chairman of the Allcargo Group.
- Ketan Kulkarni — Managing Director & Chief Executive Officer, Allcargo Logistics.

The company's board also includes independent directors drawn from logistics, finance, and public-sector backgrounds, reflecting its status as a publicly listed company on India's stock exchanges.

## 7. Mission, Vision & Values

- Customer-first approach — described internally as staying customer-centric and proactive in every interaction.
- Innovation — investing in digitally-enabled, well-governed logistics operations and encouraging fresh, disruptive thinking.
- People and governance — building committed teams and upholding ethics, humility, and strong governance standards.
- Sustainability — minimizing environmental impact, supporting research on sustainability, and acting as a responsible corporate citizen.

These four values are reflected concretely elsewhere in the company's operations rather than existing only as a statement of intent: the customer-first principle is visible in the ECU360 self-service tracking platform, the innovation principle in the company's ongoing digital-transformation initiatives, and the sustainability principle in the electric-vehicle fleet described in the following section.

## 8. Sustainability & CSR

Allcargo has been building out ESG-linked initiatives across its operations, including deploying electric vehicles in its first- and last-mile delivery fleet — the company describes itself as the first Indian logistics company to onboard more than 100 electric vehicles for this purpose. It has also set up a dedicated Transformation Office focused on applying technology to long-standing logistics challenges.

The electric-vehicle deployment is concentrated specifically in first- and last-mile delivery rather than long-haul transport, which reflects where electric vehicles are currently most practical within a logistics network: short, frequent urban and semi-urban delivery routes suit current EV range and charging infrastructure far better than long-distance highway haulage between cities or ports. This is a useful distinction to keep in mind if a customer asks specifically whether their long-haul shipment is being moved by an electric vehicle, since the current fleet deployment is focused on the delivery leg closest to the end recipient.

## 9. Recognition & Scale

- Operates as one of the largest NVOCCs in the LCL segment worldwide.
- Runs four Container Freight Stations in India (JNPT, Chennai, Mundra, Kolkata) plus a joint-venture ICD at Dadri.
- Publicly traded on Indian stock exchanges under the ticker ALLCARGO.
- Celebrated 30 years of operations in 2023.

Taken together, the four Container Freight Stations and the Dadri ICD give Allcargo a physical customs-clearance footprint spanning India's west coast (JNPT, Mundra), south (Chennai), east (Kolkata), and north (Dadri, serving the Delhi NCR), which is a useful geographic reference point when a customer asks which facility their shipment is likely to move through based on origin or destination within India.
